

“ Employee productivity and web security were two top concerns for our company. By installing Livia Web Protection, we are able to secure the Internet to keep employees focused on the tasks at hand, while also protecting the network from web based threats and dangers. ”

Damin Zacho, Zacho Sports

Internet Safety & Productivity

Small businesses often do not have the resources or expertise to properly protect their computer networks and assets.

- Did you know that 60% of the top 100 web sites were involved in malicious activity last year? Unproductive employees are extremely costly and expose the company to security and information breaches while wasting time on the Internet.
- 30-40% of Internet use in the workplace is not related to business and 60% of all online purchases are made during working hours.

Small businesses need the tools large businesses have been using to combat these challenges for years.

About Livia

Livia Web Protection is an Internet filtering and security service developed to safeguard small business from online threats and ensure employee productivity. Powered by industry leading Websense® Web security and Web filtering technology, which is already protecting more than 50,000 organizations worldwide, Livia Web Protection delivers a secure, simple to manage approach to Web security.

The benefits of Livia:

- **Easy to install** – up and running in minutes, immediate protection for computers
- **Easy to use** – using a Web-based user interface, quickly change which Web filtering policies are active and running
- **Comprehensive, accurate web protection** – receive the most comprehensive, accurate Web protection available utilizing the Websense database of 35 million Web sites
- **Free, real-time updates** – use the most up to date Web protection with real-time updates and free product upgrades
- **Active reporting** – create detailed reports that show sites visited, time spent online and more

How Livia Works

Livia customers select from pre-defined Web filtering protection levels. Once protection levels are set, browsing to specific Web pages is either allowed or blocked, based on the category of a Web site. For example, if an employee browses to a gambling site or unknowingly clicks on a link to an infected (malicious) web site, access to that Web site will be automatically denied and a block Web page will appear on the screen. Should employers prefer to block or allow more access, making changes to filtering policies is quick and easy.

Because Livia is powered by Websense® technology, Livia customers are utilizing the same proven enterprise class Web filtering for their businesses, with access to the Websense® data-base of more than 35 million Web sites. This database is updated on a continual basis, providing real-time protection from the thousands of unwanted and dangerous Web sites that pop up daily.

Livia provides a true 'set it and forget it' experience. Once the product is installed and set up, inappropriate sites are automatically blocked. Filtering levels can be changed with the click of a button.

Computer Name	Protection Level	Status	
Conference Room	Basic	Trial	Edit Purchase
Taylor	Restrictive	Active	Edit
Megan	Restrictive	Active	Edit
John's Laptop	Monitor Only	Active	Edit

Easily view and manage all of your computers from your "Settings" page.

Users will see a "block" page when attempting to access an unauthorized site.
