VM BACKUP
Hyper-V | VMware

Altaro VM Backup is a hassle-free, affordable backup solution for Hyper-V and VMware virtual machines, backed by outstanding support. Install the software and start your first VM backup in under 15 minutes, without training or advanced knowledge.

With an intuitively designed user interface Altaro VM Backup is easy to use, doesn't require any additional software to run and doesn't break the bank.

Backup and replication you can bank on

Protecting your data should be easy yet flexible and powerful enough to meet your disaster recovery needs. With Altaro VM Backup you can:

- **Back up live Hyper-V and VMware VMs** with zero downtime and Cluster Shared Volumes with ease.
- **Replicate selected VMs to an offsite location** for disaster recovery protection through your internet connection, boosted by WAN Acceleration. Replicate directly to offsite storage or by enabling **drive swap rotation** on selected drives.
- **Compress VM backups** to reduce backup storage size significantly and use military grade **AES encryption** to secure VM backups.
- **Schedule backups** the way you want them, setting grouped backup schedules or schedule backup jobs for individual VMs.
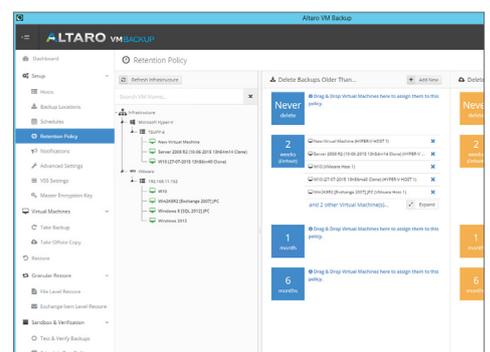

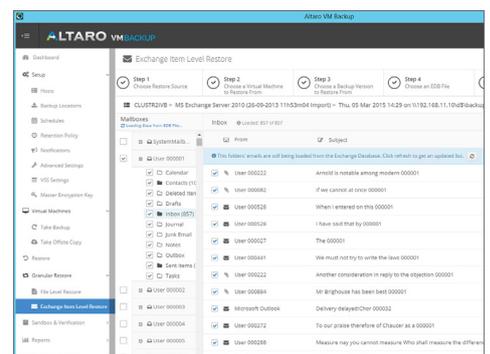

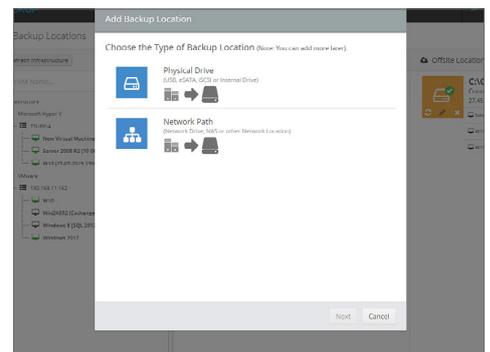

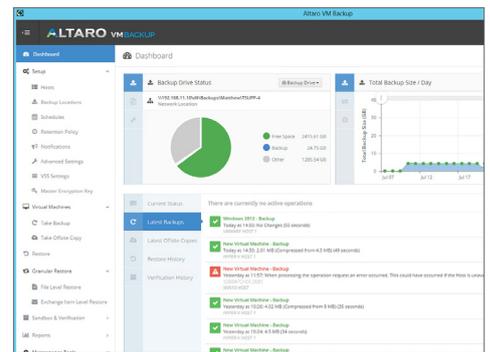

- Back up VMs to **multiple backup locations**.
- Specify **backup retention policies** for individual VMs.

Fast, reliable restores and recovery

A solid backup solution proves itself through the speed, flexibility and reliability of restores when your organization's data is on the line. Altaro VM Backup offers you a host of tools to recover what you need, FAST.

- **Instant File Level Restore** – Also retrieve individual files directly from your VM backups.
- **Exchange Server Item-Level Restore** – Browse through your Exchange VM backup's file system and restore individual emails instantly.
- **Fast OnePass Restores** – Quick restore of new and old backups, through optimized performance.

- **Restore to a different host** – Restore an individual or a group of VMs to a different host.
- **Restore different versions** – Restore from multiple points in time rather than just 'the most recent backup'.
- **Restore Clones** – Restore VMs to the same Host but with a different name, without the need to overwrite your live VMs.

Full control over your backups – A single pane of glass

Being able to execute quickly and easily, having complete control over backup/restore jobs is crucial. Altaro VM Backup provides you with quick access to all hosts in your environment.

Central management console – Full control over multiple instances of Altaro VM Backup in your environment, through a single pane of glass

Intuitive user interface – Anyone can use, no expert required

Remote management – across all hosts

Queue backup/restore jobs for increased flexibility

- Sandbox Restore Tests can be performed to verify backup integrity, manually or fully automated.

- Run backups for **multiple hosts concurrently,** drastically reducing time required to back up multiple Hosts.

OS Support

- You can download and install Altaro VM Backup on a machine running Microsoft Windows Server 2008 R2, 2012, 2012 R2 and Microsoft Windows 7 (64-bit) and Windows 8 (64-Bit).

- You can back up the following Hyper-V hosts: Windows Server 2008 R2, 2012 and 2012 R2 (all editions) and Microsoft Windows Hyper-V Server 2008 R2, 2012 and 2012 R2 (core installation)

- You can back up the following VMware hosts: VMware vSphere and ESXi 5.0, 5.1, 5.5 and 6.0, vCenter 5.0, 5.1, 5.5 and 6.0.
