## THE BENEFITS:

- **Powerful Protection and Performance:** Sophos Firewall and the XGS Series provide a significant performance boost over all previous firewall models. The Xstream architecture accelerates important cloud, SaaS and other trusted traffic to free up resources on the main CPU for important deep packet inspection and TLS decryption for the traffic that needs it.
- **The Next Generation:** Sophos Firewall OS already offers many features not available in Sophos UTM today and has a wealth of SD-WAN features, scalable offloading using the Xstream Flow Processor in the XGS Series, and much more.
- **More than a Firewall:** The ultimate cloud management platform, Sophos Central, opens up a complete ecosystem of possibilities, not only for the central management and reporting for one or more firewalls, but also for all other Sophos security solutions. This allows further integration with other products for cross-product threat intelligence and analysis.
- **Xstream Protection:** A single license bundle for advanced protection with Network, Web, and Zero-Day Protection plus Central Orchestration for SD-WAN VPN orchestration and a 30-day Central Reporting Advanced data retention period.
